SUMMARY

Full-stack engineer with 10+ years shipping production web apps: Laravel and PHP backends with React, Vue and Inertia frontends. I own features end to end, from schema and API design through queues, real-time updates, tests and CI/CD. I design before I code, prove changes on real data, and build my own AI tooling, including Claude Code plugins and MCP servers, so agents speed up the work while the decisions stay with me.

SKILLS

Languages: PHP, Typescript, Javascript, Python, SQL

Backend: Laravel, Domain-driven design, REST API design, Hexagonal architecture, Event sourcing, Modular monolith, Microservices, Node.js, Express, Django

SELECTED WORK

Setting up a self-hosted Laravel server with a labelled log

I built one virtual server for a Laravel app from a written guide and logged every difference from it. A tested restore and a tested zero-downtime rollback are what I trust, and the open items are listed. **Nightly dump restored into a scratch database with matching counts; rollback and roll-forward each kept 30 of 30 health checks at 200.**

EDUCATION AND LANGUAGES

Bachelor's Degree in Information Technology, Holy Cross of Davao College

English · Filipino (Tagalog) · Bisaya
